24011 7590 11/05/2008 SILVERBROOK RESEARCH PTY LTD 393 DARLING STREET BALMAIN, 2041 AUSTRALIA			EXAMINER NGUYEN, LAM S	
			ART UNIT 2853	PAPER NUMBER
			MAIL DATE 11/05/2008	DELIVERY MODE PAPER

Please find below and/or attached an Office communication concerning this application or proceeding.

The time period for reply, if any, is set in the attached communication.

Office Action Summary	Application No. 10/760,189	Applicant(s) SILVERBROOK ET AL.	
	Examiner LAM S. NGUYEN	Art Unit 2853	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --

Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) OR THIRTY (30) DAYS, WHICHEVER IS LONGER, FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) ☒ Responsive to communication(s) filed on 14 August 2008.
- 2a) ☒ This action is **FINAL**. 2b) ☐ This action is non-final.
- 3) ☐ Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) ☒ Claim(s) 1-5 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) ☐ Claim(s) _____ is/are allowed.
- 6) ☒ Claim(s) 1-5 is/are rejected.
- 7) ☐ Claim(s) _____ is/are objected to.
- 8) ☐ Claim(s) _____ are subject to restriction and/or election requirement.

Application Papers

- 9) ☐ The specification is objected to by the Examiner.
- 10) ☐ The drawing(s) filed on _____ is/are: a) ☐ accepted or b) ☐ objected to by the Examiner.
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).
Replacement drawing sheet(s) including the correction is required if the drawing(s) is objected to. See 37 CFR 1.121(d).
- 11) ☐ The oath or declaration is objected to by the Examiner. Note the attached Office Action or form PTO-152.

Priority under 35 U.S.C. § 119

- 12) ☐ Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
- a) ☐ All b) ☐ Some * c) ☐ None of:
1. ☐ Certified copies of the priority documents have been received.
 2. ☐ Certified copies of the priority documents have been received in Application No. _____.
 3. ☐ Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).

* See the attached detailed Office action for a list of the certified copies not received.

DETAILED ACTION

Claim Rejections - 35 USC § 112

The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

Claim 1 is rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The claim recites the limitation “the first printhead module” (line 10) with insufficient antecedent basis for this limitation in the claim. It is also unclear that how the second end of the printhead assembly opposites to the first printhead module.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

1. Claims 1-5 are rejected under 35 U.S.C. 103(a) as being unpatentable over Silverbrook et al. (US 6612240) in view of McEfresh et al. (US 6843552).

Silverbrook et al. ('240) discloses a printhead assembly (*FIG. 14: Each printhead assembly comprises a PCB (108 or 110) and a printhead module including elements 104.1 and 106.1 (or 104.2 and 106.2)*), comprising:

at least one printhead module comprising at least two printhead integrated circuits

Art Unit: 2853

(FIG. 14: One printhead module comprising two printhead integrated circuits 106.1 and 104.1), each of which has nozzles formed therein for delivering printing fluid onto the surface of print media (column 6, lines 22-30) being fed along a media feed path past the printhead assembly in a media feed direction (FIG. 9: The feeding direction of print media is the one that is perpendicular/transverse to the longitudinal direction of the printhead assembly 54), a support member supporting and carrying the printing fluid for the at least two printhead integrated circuits (FIG. 14, element 120: The fluid carrier 120 carries fluid along the length of the printheads), and an electrical connector for connecting electrical signals to the at least two printhead integrated circuits (FIG. 14: Conductors 116 connects the printheads to the PCB 108 or 110); and

a plurality of longitudinally extending electrical conductors for providing power to the at least two printhead integrated circuits (FIG. 14, elements 124 and 122), the plurality of electrical conductors extending transverse to the media feed direction and being arranged as first and second groups of electrical conductors, the first and second groups of electrical conductors having combined lengths at least equal to the media feed path length, the first group extending from one end of the printhead assembly to a region intermediate the ends of the printhead assembly (FIG. 14: The first electrical conductors are the cable 122 extending from the connector 124 (located at the left end of the assembly) to the connector located at the intermediate region of the assembly. In other words, the electrical conductors extend along the longitudinal direction of the printhead assembly that is transverse to the media feeding direction), and the second group extending from the other end to connect to the first group at the region intermediate the ends of the printhead assembly (FIG. 14: The second electrical

Art Unit: 2853

conductors are the cable 122 extending from the connector located at the intermediate connector to the connector located at the right end of the assembly. Since the combined length of the first and second electrical conductors is about the length of the printhead assembly, the combined length of the first and second electrical conductors is about the length of the fed media).

Silverbrook et al. ('240), however, does not teach wherein the first and second groups of electrical conductors are connected to first and second power supplies, respectively, to supply power in parallel from both ends of the printhead assembly, wherein the first power supply being provided at a first end of the printhead assembly, and the second power supply being provided at a second end of the printhead assembly opposite to the first printhead module.

McEfresh et al. discloses an ink jet head assembly comprising a plurality of printhead integrated circuits (*FIG. 5*) and first and second groups of electrical conductors (*FIG. 5, elements 74, 74'*), wherein the first and second groups of electrical conductors are connected to a first and second power supplies provided as opposited ends of the head assembly, respectively, to supply power in parallel from both ends of the printhead assembly (*FIG. 5*).

Therefore, it would have been obvious for one having ordinary skill in the art at the time the invention was made to modify Silverbrook's printhead assembly to provide power from two ends of the printhead assembly to the printhead integrated circuits as disclosed by McEfresh et al. The motivation for doing so would have been to provide power in parallel from both ends of the printhead assembly to the printhead integrated circuits as taught by McEfresh et al. (*FIG. 5*).

- **Silverbrook et al. ('240) also discloses the following claimed invention:**

Regarding to claim 2: further comprising a casing in which the at least one printhead module and the plurality of electrical conductors are removably mounted (*FIG. 9, element 56*).

Art Unit: 2853

Regarding to claim 3: further comprising drive electronics incorporating at least one controller (*FIG. 14, elements 126*) for controlling the printing operation of at least one of the at least two printhead integrated circuits via the electrical connector (*FIG. 14, elements 116*), wherein power is provided to the drive electronics by the electrical conductors via the electrical connector.

Regarding to claim 4: wherein the first group of electrical conductors and the second group of electrical conductors overlap each other in the intermediate the ends of the printhead assembly (*FIG. 14, element 122*).

Regarding to claim 5: wherein the at least one printhead module is formed as a unitary arrangement of the at least two printhead integrated circuits, the support member, the electrical connector, and at least one fluid distribution member mounting the at least two printhead integrated circuits to the support member; and the support member has at least one longitudinally extending channel for carrying the printing fluid for the printhead integrated circuits and includes a plurality of apertures extending through a wall of the support member arranged so as to direct the printing fluid from the at least one channel to associated nozzles in both, or if more than two, all of the printhead integrated circuits by way of respective ones of the fluid distribution members (*FIG. 11, element 136*).

Response to Arguments

Applicant's arguments filed 08/14/2008 have been fully considered but they are not persuasive.

The Applicant argued that Silverbrook et al. and McElfresh et al. did not teach or suggest “a first group of electrical conductors and a second group of electrical conductors extending from

Art Unit: 2853

opposite ends and connecting together in a region between the first and second ends” without providing any explanations to support such assertion. The Examiner in response cites that the Silverbrook reference, as clearly explained in the rejection above, fully teaches such limitation.

Conclusion

Applicant's amendment necessitated the new ground(s) of rejection presented in this Office action. Accordingly, **THIS ACTION IS MADE FINAL**. See MPEP § 706.07(a). Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the date of this final action.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to LAM S. NGUYEN whose telephone number is (571)272-2151. The examiner can normally be reached on 7:00AM - 3:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, STEPHEN D. MEIER can be reached on (571)272-2149. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.
